HOUSEHOLD WATER SOFTENER

Highly effective softening of hard water
Enjoy the exquisite water life

Softening water quality
Care for the skin
Scale reduction
Flexible clothing
Small size
Take care of household appliances

HARD WATER HAZARD

High hardness water will bring a lot of inconvenience, directly lead to water quality of life

Ordinary tap water	Soft water
Clothing	
Harden and turn yellow after washing	Soft protective clothing
Hair	
Hair is dry and easily knotted	Softer your hair
Electric appliance	
Scale seriously shorten the service life	Prolong the service life of household appliances

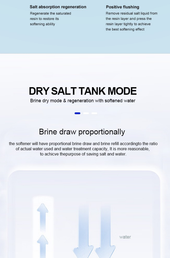
INTELLIGENT REGENERATION

Periodic cleaning ensures high-quality soft water

AUTOMATIC MEMORY FUNCTION

Power off memory function

The parameters set by users, such as regeneration time, brine refill time, backwash time, brine &slow rinse time, fast rinse time, and so on, can be saved permanently no matter how long the powers off



COUNTERCURRENT REGENERATION TECHNOLOGY

Save salt and water for you

Countercurrent regeneration technology, reducing regeneration interval, further saving salt and water consumption for regeneration

Move
Reduce the concentration of Ca^{2+}/Mg^{2+}plasma in water and softer water quality

Salt tank make-up water
Supplement soft water to the salt tank to dissolve the regenerant salt and produce saturated salt solution

Backwash
Remove suspended impurities and broken resin from the surface layer of the resin

Salt absorption regeneration
Regenerate the saturated resin to restore its softening ability

Positive flushing
Remove the residual liquid from the resin layer and make the resin layer tightly to achieve the best softening effect

DRY SALT TANK MODE

Brine dry mode & regeneration with softened water

Brine draw proportionally

the softener will have proportional brine draw and brine refill accordingly the ratio of actual water used and water treatment capacity. It is more reasonable, to achieve thepurpose of saving salt and water.

VACATION MODE

Comfortable time without worry

Before traveling
please set the softener to vacation mode.In this mode, the softener will be in beaverlik status firstly, then stop the regeneration and brine draw status. After fatter draw finished, the valve will go to the bypass position or close the inlet valve

The end of the holiday
service. It effectivelyprevents the softener from operating for a long time, and avoids loss when softener ceases to system resuspension situation.

TECHNICAL PARAMETERS

NBN-S3 NBN-S6

Product Name	Household water softener	Household water softener
Product Model	NBN-S3	NBN-S6
Water Pressure	0.15-0.6Mpa	0.15-0.6Mpa
Water Temperature	5~38℃	5~38℃
Total Capacity	2000m³	3000m³
Water Flow	1.6m³/h	2.6m³/h
Package Size	448*32*1555mm	448*32*1111*56mm
